

Benedict Pabatao

Staff Software Engineer, Platform & Product | AWS · Terraform · TypeScript

Italy (Remote, CET) | jajapabatao@gmail.com | linkedin.com/in/benedict-pabatao | github.com/bpabatao | bpabatao.github.io

SUMMARY

Staff Software Engineer with 8+ years in software (5+ on AWS), the last 3+ on a multi-tenant SaaS platform behind 7 live utility client portals, where I am now the most senior hands-on engineer. I am the primary author of its core REST API, both generations, and of the Terraform control-plane the fleet is migrating onto. I also run it: CI/CD, observability, incident response, security remediation and cost.

PROFESSIONAL EXPERIENCE

ESC Partners / HometownHUB - multi-tenant utility customer-portal SaaS (contract) - New York, May 2023 - Present
USA (Remote)

Staff Software Engineer, Platform & Product

Sep 2025 - Present

Senior Full-Stack Engineer (Cloud)

May 2023 - Aug 2025

- **Primary author of the fleet's core REST API, both generations** - 58% of v1, which serves 6 of the 7 live tenants, and 76% of v2 (Fastify, TypeScript, Zod, MongoDB on ECS Fargate), in production for the seventh since June 2026; own the shared auth, data-access and Oracle CCS billing integration (OAuth 2.0).
- **Primary author (93%) of the internal developer platform** - a Terraform control-plane (9 stacks, ~60 AWS resource types) with a Fastify/React dashboard that plans, applies and attributes cost; the fleet is moving onto it from per-portal provisioning, tenant by tenant.
- **Shipped the fix for an account-takeover gap in SSN verification** - last-four plus street matched the wrong person on ~2.4% of one tenant's accounts; added attempt lockout and ZIP-based disambiguation, flag-gated for per-tenant rollout.
- **Took the sessions view from 102s to 2.4s (43x)** with one composite index, as sole author of the audit and observability layer: outbound provider-call capture, tiered audit retention, an account-to-IP anomaly view and a takeover alert.
- **Cut CI from ~12 to ~7 min on the core API and ~10 to ~6 min on the admin portal** (esbuild, cache-mounted installs, fail-fast) while adding blocking Snyk gates (newer portals, both APIs) and keyless OIDC deploys on 4 repos.
- **Set engineering standards as primary platform engineer** for 11 tenants across production and test (7 live) - 13 accepted ADRs, shared provisioning modules, pre-push and pipeline gates - and run the fleet: Bitbucket Pipelines, CloudWatch, incident response and cost (Cost Explorer attribution, a shared ALB, Fargate Spot on test).
- **Ran remediation across 6 external pentest rounds** - triaged 60 findings into severity-labelled fix batches: IDOR, unauthenticated endpoints, URL-borne tokens, client-side privilege checks, missing rate limits.
- **Built, measured and pruned the team's AI tooling** - kept a Claude PR reviewer in CI across the API and portal repos, shipped a Bedrock knowledge-base agent (curated-first retrieval, flagged SQL fallback), and shelved a Bedrock auto-remediation service after 12 of 13 runs failed.
- **Built a runtime feature-flag platform and own the billing-to-payments reconciler** - MongoDB-backed flags replace build-time env vars across 6 admin consoles and 4 portals, per tenant; the reconciler (Oracle CCS vs Invoice Cloud) detects drift by default, repairs only when guarded, and replaced a batch sync I switched off.

Nmbler - Biopharma Strategy & Collaboration Platform (contract) - London, UK (Remote)

Mar 2024 - Present

Senior Full-Stack Engineer

- **One of 3 core engineers, reporting to the CEO**, on an ISO 27001-certified biopharma strategy SaaS in private beta with enterprise pharma clients (React, TypeScript, Node, GraphQL, Prisma, AWS Elastic Beanstalk).
- **Originated two subsystems from scratch**: a schema-driven engine (Prisma DMMF) that deep-clones entire strategies, and the archive/restore isolation system for the Edge module.

- **Fixed two concurrent-write races:** rating upserts now run in a transaction behind a Postgres advisory lock, and a duplicate-row race in a GraphQL sync resolver is gone.
- **Built the in-house observability layer, then removed New Relic** - an Apollo plugin logs one structured event per GraphQL operation to CloudWatch, classed as fault, reject or noise; staging and production dashboards; Beanstalk logs in CloudWatch; Sentry hardened (tunnel, sourcemaps, gated replay).
- **Built the AI assistant's per-strategy response controls** - a mode only internal strategy leads can set - plus its Notion-backed knowledge base and AI-endpoint hardening.

EARLIER EXPERIENCE

Senior Software Engineer - CoDev (agency, embedded with BaseMap) - Utah, USA (Remote) (JavaScript, Docker)	Mar 2022 - May 2023
Full-Stack Software Engineer - Ordermentum (contract) - NSW, Australia (Remote) (Node.js, PostgreSQL, Docker, Kubernetes)	Sep 2022 - Mar 2023
Senior Software Engineer II - HCL Technologies - New York, USA (Remote) (Kubernetes, Selenium)	Feb 2020 - Apr 2022
Full-Stack Developer - Zencomputes - Singapore (React, Node.js, AWS Elastic Beanstalk)	Mar 2019 - Feb 2020
Mobile Application Developer - Halcyon Digital Media Design - Philippines (Ionic)	Mar 2018 - Mar 2019

TECHNICAL SKILLS

CLOUD & IAC: AWS - ECS Fargate, Lambda, CloudFront, Cognito, DynamoDB, EventBridge, ElastiCache, Secrets Manager, WAFv2, SES, S3, Route 53, VPC, ALB, IAM, Elastic Beanstalk, Terraform, Docker

PLATFORM & DEVOPS: Internal Developer Platform, Multi-tenant provisioning, Bitbucket Pipelines, GitHub Actions, OIDC deploys, Snyk, FinOps - Cost Explorer

BACKEND & DATA: Node.js - Fastify, Express, TypeScript, Python, REST APIs, GraphQL, Prisma, PostgreSQL, MongoDB, Zod, Vitest, Playwright, Oracle Utilities CCS, Invoice Cloud

OBSERVABILITY & SECURITY: CloudWatch, CloudWatch Synthetics, Sentry, Structured logging, OWASP/IDOR, OAuth 2.0, JWT, Pentest remediation

FRONTEND & AI: React, Next.js, MUI, Styled Components, Tailwind, React Native (Expo), Accessibility (WCAG 2.1 AA), AWS Bedrock (Claude), AI code review in CI, LLM knowledge bases (RAG)

EDUCATION

BS Information Technology

Polytechnic University of the Philippines | 2014 - 2018
