SUMMARY

Staff Software Engineer - I build the platform other engineers ship on. 8+ years in software, 5+ on AWS, ~3 leading a multi-tenant SaaS platform: primary author (93%) of the Terraform control-plane the fleet is migrating onto, primary author of the core REST API behind 7 live utility client portals (58% of the v1 serving them today) and of its v2 successor (78%), now in production for the first tenant ahead of its cutover - and its operator: CI/CD, observability, on-call, cost.

PROFESSIONAL EXPERIENCE

Staff Software Engineer, Platform & Product

ESC Partners / HometownHUB (contract) - New York, USA (Remote) | May 2023 – Present

Staff Software Engineer, Platform & Product | Sep 2025 – Present

Previously Senior Full-Stack Engineer (Cloud) | May 2023 – Aug 2025

- **Primary author of both generations of the fleet's core REST API** - 58% of v1, which serves all seven launched tenants, and 78% of v2, in production for the first tenant ahead of its cutover - owning the multi-tenant auth, data-access and Oracle CCS (OAuth 2.0) integration patterns both generations share.
- **Primary author (93%) of the internal developer platform:** a Terraform control-plane (9 stacks, ~60 AWS resource types - Cognito, ECS Fargate, CloudFront, WAFv2, Secrets Manager, Route 53, ElastiCache, KMS) with a Fastify/React dashboard that plans, applies and cost-attributes; the fleet's per-portal provisioning is consolidating onto it tenant by tenant.
- **De-facto technical lead of a 5-engineer team** - most senior hands-on engineer, reporting to the COO/CEO; set the platform standards the fleet adopts (provisioning modules, CI/CD, security guardrails).
- **Ran the remediation program for 6 rounds of external penetration testing** - triaged 60 findings into severity-labelled batches (IDOR, unauthenticated endpoints, URL-borne tokens, client-side privilege checks, missing rate limits), then blocking Snyk gates and keyless OIDC deploys took long-lived AWS keys out of the deploy path.
- **Own the reconciliation between two systems of record** - a detection-only CCS/Invoice Cloud reconciler running four times daily in production as a scheduled Lambda, with per-tenant population queries, pre-flight link checks returning a reasoned verdict, and split-identity healing; it replaced the batch sync I built and retired.
- **Built, measured and pruned the team's AI tooling** - kept a Claude PR reviewer in CI on the core API and backend, shelved a Bedrock auto-remediation service that was never wired to a live alarm, shipped a Bedrock knowledge-base agent (curated-first retrieval, flagged SQL fallback), and designed a ticket-to-PR pipeline with human gates, not yet live.
- **Own and operate the multi-tenant portal infrastructure as sole platform engineer** - the 7-tenant production and test fleet - with CI/CD (Bitbucket Pipelines), Datadog / CloudWatch observability, on-call incident response, and cost-attribution tooling (Cost Explorer API) driving right-sizing, shared-ALB, and Fargate-Spot savings.
- **Shipped the fix for an SSN identity-verification gap enabling account takeover** - the last-four plus street match resolved to the wrong person on ~2.4% of one tenant's accounts - as attempt lockout plus ZIP-based disambiguation against the brute-forceable last-4 space, flag-gated for per-tenant rollout.
- **Built a runtime feature-flag platform** - flags moved from build-time env vars to a MongoDB-backed runtime reader with change-stream SSE push and fail-open on outage, wired into 6 v1 tenants' admin consoles and 4 customer portals and enabled per tenant behind a gate, with a flag manifest and parity tests guarding tenants still on compile-time flags.
- **Owned production go-live readiness for 6 client launches** - primary engineer on four, core contributor on two - environment validation, deployment, rollback planning, and stabilization.

Senior Full Stack Engineer

Nmblr - Biopharma Strategy & Collaboration Platform (contract) - London, UK (Remote) | Mar 2024 – Present

- One of 3 core engineers on an ISO 27001-certified biopharma strategy SaaS (React/TypeScript, Node/GraphQL/Prisma, AWS Elastic Beanstalk), reporting to the CEO; private beta with enterprise pharma clients.
- **Originated two subsystems from scratch:** a DMMF-driven strategy clone engine (automated deep-clone of entire strategies) and the Edge archive/restore isolation system.
- **Serialized concurrent writes and killed data races:** wrapped rating upserts in a transaction behind a Postgres advisory lock (`pg_advisory_xact_lock`), fixed a duplicate-row race in a GraphQL sync resolver, blocked re-entrant AI generation calls, made optimistic cache creates idempotent by id, and reconciled stale polls that hid new rows.
- **Built the in-house observability layer:** an Apollo plugin emitting one structured `obs_event` per GraphQL operation to CloudWatch, an `errClass` fault/reject/noise scheme, staging and production dashboards, Beanstalk logs streamed to CloudWatch, Sentry hardened (tunnel, sourcemaps, gated replay) - then removed a dead-pipe New Relic billing ~\$176/month.
- Contributed to real-time collaboration (GraphQL subscriptions), OpenAI-backed generation features, and platform security (OWASP/IDOR, JWT sessions); built AI Context Configuration - a per-strategy, per-user assistant response mode only a non-external strategy lead can choose, clamped on read and refused on write otherwise - plus help-centre retrieval.

EARLIER EXPERIENCE

Senior Software Engineer - CoDev - agency; embedded with client BaseMap (Utah, USA / Remote) | Mar 2022 – May 2023

Full Stack Software Engineer - Ordermentum (NSW, Australia / Remote, contract) | Sep 2022 – Mar 2023

Senior Software Engineer II - HCL Technologies (New York, USA / Remote) | Feb 2020 – Apr 2022

Full Stack Developer - Zencomputes (Singapore) | Mar 2019 – Feb 2020

Mobile Application Developer - Halcyon Digital Media Design (Philippines) | Mar 2018 – Mar 2019

TECHNICAL SKILLS

CLOUD & INFRA: AWS - ECS Fargate, CloudFront, Cognito, ElastiCache, KMS, Secrets Manager, WAFv2, SES, S3, Route 53, VPC, ALB, IAM, Elastic Beanstalk, Terraform, Docker, Linux

PLATFORM & DEVOPS: Internal Developer Platform, Multi-tenant provisioning, Bitbucket Pipelines, GitHub Actions, FinOps - Cost Explorer

AI ON THE PLATFORM: AWS Bedrock (Claude), AI code review in CI, LLM knowledge bases (RAG), Evaluating and retiring AI tooling

BACKEND & DATA: Node.js - Fastify, Express, TypeScript, Python, REST APIs, GraphQL, Prisma, PostgreSQL, MongoDB, Zod, Vitest, Playwright, Oracle Utilities CCS, Invoice Cloud

OBSERVABILITY & SECURITY: Datadog RUM/APM, CloudWatch, Sentry, Structured logging, Session Replay, OWASP/IDOR, JWT, OAuth 2.0, OIDC, IAM, WAFv2, Snyk, Pentest remediation

FRONTEND: React, Redux, TypeScript, Styled Components, Tailwind, Next.js

PRACTICES: Platform Engineering, Infrastructure-as-Code, System Design & Architecture, Security & Compliance, Incident Response

EDUCATION

BS Information Technology

Polytechnic University of the Philippines | 2014 – 2018
